
TECHNICAL SUMMARY

Experienced Java Backend Developer with over 4+ years of expertise in Backend development. Proficient in Java(including Java 8 features), Spring framework (Spring Boot, Spring Data JPA, Spring MVC), Hibernate, Spring AOP, Spring Security and microservices architecture. Skilled in developing RESTful web services and highly adept in database management with PostgreSQL and MySQL. Additionally, experienced with Angular for frontend development, version control using Git, test-driven development with JUnit and Mockito, containerization with Docker, and Agile methodologies.

TECHNICAL SKILLS

Core Java, Java 8, Spring Boot, Spring Data JPA, Hibernate, Spring MVC, MySQL and PostgreSQL, Microservices, Build Tools (Maven), API Testing (Postman and Swagger), Testing (JUnit, Mockito), Version Control (Git), RESTful WebServices, Spring AOP, Spring Security(Basics), Containerization (Docker), Apache Kafka, HTML, CSS, JavaScript, Angular

TECHNICAL EXPERIENCE

Tiger Analytics

Feb 2025 - present

Java Backend Developer / WFM (Workforce Management Migration)

- Migrated the Workforce Management application database from **DB2** to **AlloyDB**, ensuring seamless transition and minimal downtime.
- Analyzed and updated numerous **MyBatis XML mappings** and **JDBC queries**, making necessary syntax and type-casting changes to support AlloyDB.
- Optimized complex SQL queries for AlloyDB, improving performance, scalability, and reducing query execution time.
- Collaborated with database administrators and application developers to resolve compatibility issues during migration.
- Ensured data consistency and integrity through rigorous testing, validation, and debugging across multiple environments.
- Created comprehensive JUnit tests and integration test suites to validate query execution and database interactions post-migration.
- Utilized **Postman** and **Swagger** for API testing, ensuring that backend services interacted correctly with the migrated database.
- Implemented robust logging and monitoring mechanisms to track query performance and application behavior post-migration.

Java Backend Developer / GRIR Reconciliation Platform | PepsiCo

- Developed enterprise-grade microservices for automating Goods Receipt and Invoice Receipt reconciliation workflows across SAP S/4HANA and Ariba systems.
- Designed event-driven architecture using Azure Service Bus for asynchronous processing, routing, and status tracking of financial reconciliation transactions.
- Built REST APIs and business validation frameworks supporting GR creation, reversal, partial receipt processing, and service-entry workflows.
- Engineered scheduled ingestion services to synchronize discrepancy records from Celonis into SQL Server and automate exception management.
- Developed orchestrator services responsible for payload transformation, source-system routing, workflow coordination, and response processing.
- Created comprehensive JUnit tests and integration test suites to validate query execution and database interactions post-migration.
- Utilized **Postman** and **Swagger** for API testing, ensuring that backend services interacted correctly with the migrated database.
- Implemented robust logging and monitoring mechanisms to track query performance and application behavior post-migration.

Capgemini

June 2023 - Jan 2025

Java Backend Developer/ Optimus

- I designed and developed RESTful APIs that facilitate communication between different modules of the system, such as Orders, Network, Inventory, Billing, Invoice, and Reports.
- I worked with the database team to design and optimize the database schema for the project. This includes creating and modifying database tables, writing complex SQL queries, and ensuring efficient data retrieval and storage.
- I collaborated with the front-end development team to ensure seamless integration between the back-end and front-end components of the system.
- I used to debug and resolve any issues or bugs that arise during the development and testing phases.
- Developed comprehensive JUnit test suites to validate APIs and methods.
- Maintained test coverage to ensure comprehensive validation of code functionality.
- Leveraged advanced features of Java 8 to optimize code performance and enhance efficiency.
- Integrated logging mechanisms to track and troubleshoot system operations in a seamless way.

Java Backend Developer/ Ruckkus

Mar 2022 - May 2023

- Developed back-end of the Hiring Module, creating robust APIs, data models and business logic
- Handled user management for registration, login, and access control with integration between the back end and the front end. closely with Frontend and Backend developers to ensure smooth integration and functionality.
- Leveraged Java 8 features for the code optimization.
- Created comprehensive JUnit test suites for backend validation and ensured test coverage across both layers.
- Implemented logging mechanisms to monitor system operations and ensure seamless tracking.
- Used Postman and Swagger for API testing, ensuring flawless integration and functionality from backend to frontend.
- Utilized Postman and Swagger for meticulous API testing, ensuring flawless integration and functionality.

EDUCATION

Electrical Electronics Engineering, Sree Chaitanya Institute Of Technological Sciences

June 2021

ACTIVITIES

Certified as Java Master Level Developer from OCEAN

Version Control with Git from Atlassian

Certified in Java Programming: Solving Problems with Software from Duke University

Building Scalable Java Microservices with Spring Boot and Spring Cloud from Google Cloud
